

Dental Crowns

Dental crowns on your teeth solve a range of problems, from lost fillings and root canals to cracked or fractured teeth.

About

We specialise in fitting porcelain crowns because they do not contain any metal and are free of substances that may be harmful to your body. Porcelain Crowns create a more aligned and symmetrical appearance to your teeth as well as giving your teeth added strength, durability and stability.

Prevention

Continue twice daily brushing and once daily flossing to prevent gum disease.

Procedure

1. Our dental practitioners will make an impression of your teeth to ensure the crown fits perfectly according to the exact dimensions of the damaged teeth.
2. The damaged tooth/teeth are fitted with porcelain crowns.

Cost | From \$1,200 Per Tooth

Several factors can vary and increase the cost of treatment. Our team will advise you of these during your consultation.
