

Eyebrow Enhancement

New anti-wrinkle injections and facial fillers have now enabled us to non-surgically lift the eyebrows and rejuvenate your eye area.

Treatment | First Stage

The first stage of eyebrow enhancement is the anti-wrinkle injections. The injections will relax some of the muscles around your eyes to help create an overall lift in the eyebrows.

There are specific muscles that hold the eyebrows down, especially the muscle surrounding the eye, known as orbicularis oculi. By carefully injecting the anti-wrinkle serum into these muscles, the eyebrows are released from this downward pull, and the forehead muscles can lift the eyebrows up without being restrained. The injections lead to an increase of a few millimetres in eyebrow height.

Treatment | Second Stage

The second stage involves an injection of a facial filler underneath your eyebrow, this will provide support to the eyebrow elevating it. This injection will also soften the bony orbital rim around the eyebrows, leading to a softer and more youthful appearance. We may also inject facial fillers into the middle half of the upper lid to help reduce the sag of the eyelids.

Cost | From \$275 Per Area

Several factors can vary and increase the cost of treatment.

Paramount Dental Sydney

Dr Amrinder Oberoi

Principal Dentist - BDS Hons. (NZ)
