

Fillers & Anti-Wrinkle Injections

About

Facial fillers, also known as Collagen, Restylane and Botox are products that rejuvenate your face through a series of facial injections. Facial fillers not only reduce but can also eliminate wrinkles and raising scar depressions. An injectable facial filler aims to change your facial profile to a more youthful one.

Cost | From \$275 Per Area

Several factors can vary and increase the cost of treatment. Our team will advise you of these during your consultation.

Treatment

A facial filler treatment entails a series of tiny injections under the skin's surface. The amount administered depends on the depth and size of the skin defect or wrinkle.

Depending on the type of facial fillers or filler injections used, the results last from a few months to 12 months. For optimal results, additional treatment sessions are encouraged.

Do Fillers Hurt?

The injections hurt a little, and the pain will vary depending on the patient and the area being injected. Anaesthetic is generally used for the very sensitive area around your lips. There are some side effects to the injections, the most common being bruising, which will pass in a number of days.
