

Invisalign

Clear, comfortable and removable braces.

About

Invisalign is a method of orthodontic treatment which uses a series of clear teeth aligners that can be removed when necessary, like when you brush and floss your teeth or a formal event.

Process

The whole process can take anywhere from 6 to 24 months.

When you begin treatment you'll be wearing a set of aligners customised for your mouth and as the aligners gently move your teeth into position, you will be given a new set.

Decreased Treatment Time

Invisalign is much quicker than traditional metal braces. The average course of treatment for Invisalign takes about one year. You will be required to visit us every 6 to 8 weeks for adjustments and to check your progress. Throughout the treatment process, you will receive a new set of custom moulded clear aligners every two weeks.

Cost | From \$2,500

Several factors may vary and increase the cost of treatment. We can advise you of the full cost and provide a treatment plan after your first orthodontic consultation.
